Final Year Project

My final year project is on “Faculty Profile Management System”. Faculty Profile Management System is a web-based software application that is designed to manage the faculty profiles in an educational institution. The system provides a platform where faculty members can create and maintain their profiles, including their personal details, educational qualifications, research experience, publications, and other relevant information

List of Projects

Tailor Management System Web Application

React JS, Express JS, Node JS, Mongo DB, Bootstrap 5, CSS, HTML

- Design a comprehensive Tailor Management System using React, Bootstrap, CSS, and HTML. The system includes features such as customer registration, order tracking, payments, status updates, and measurements, offering a fully responsive and advanced web application experience. Use Express JS, Node JS and Mongo db for backend development. Currently working on further enhancements and adding new features to optimize functionality

POS (Point of Sale Management System Web Application)

React JS, Express JS, Node JS, Mongo DB, Bootstrap 5, CSS, HTML

- Designed an advanced POS system using React, Bootstrap, CSS, and HTML, featuring product management, sales, purchases, inventory control, detailed reports, payment handling, ledgers, and returns. The system is fully responsive, providing a seamless user experience for businesses. Use Express JS, Node JS and Mongo db for backend development. Currently working on enhancing reporting capabilities and improving overall performance.
